Digital Futures – Sustaining an internship programme online

Three main platforms

Zoom

For any group meetings:

- Weekly sessions
- > Hangouts
- > Talks with external speakers
- Virtual tours

Microsoft Teams

Individual tasks with supervisors:

- Can hold chats, calls and meetings
- Day-to-day communications
- General Announcements

Notion

Co-working space for:

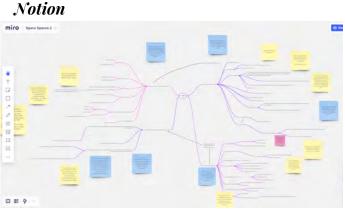

- Scheduling and announcements
- Group-work
- Information storage and dissemination (embedding, file sharing, etc.)
- Teams complements Notion; the former is for day-to-day communications and supervisor-based tasks, the latter is for the group parallel programme (lacks the day-to-day function)
- Note that Notion can be used for personal functions as well such as task organization, and you can have multiple workboards (some supervisors use it with their interns too)
- Both Zoom and Teams are used for calls where the former allows for more faces to be seen, the latter is good for small group or individual calls

Some highlights and adaptations

Virtual Tours

- No access to the Museum spaces right now so the tour has to be done virtually
- Made use of Zoom, where Museum staff will bring the camera through the space (using a gimbal stabiliser)

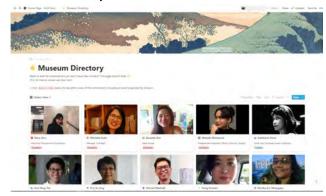

Miro boards for brainstorming activities can be embedded

Home page consolidates all other pages – easy to navigate, can have a staff directory too

In-built calendar for scheduling

Some limitations and successes, moving forward

Importance of Physical Presence

- Difficulty in moderation of discussions, maintaining a level of engagement
- Lack of organic group cohesion amongst cohort of interns; attempts at boosting group cohesion include work in group-settings, as well as weekly lunch hangouts
- No access to hands-on components such as conservation workshop

Effectiveness of Notion

- Notion is effective in consolidating all the components of the parallel internship programme onto one space
- Beyond that, it also enhances the art learning and internship programme by allowing for brainstorming, generative responses and collaboration
- When complemented by other functions like Teams, it is greatly enhanced

Moving Forward

Physical component cannot be replaced at times:

- ➤ While virtual tours right now substitute physical tours but in the future, should be complementary
- ➤ Physical meetings are necessary for group cohesion

Digital components can enhance internships in the future:

Continue to use Notion and Teams as a means of working, brainstorming and consolidating

Other questions:

- How can we effectively moderate sessions digitally to ensure participation and group dynamics? Ambiance?
- > Accommodating technical difficulties, lack of access
